

**Postdoctoral Position**  
**Department of Chemistry and Chemical Biology**  
**Cornell University**

Dear Colleagues-

I'd like to bring to your attention a postdoctoral opening which is currently available in the Protein Theory Group, in the Department of Chemistry and Chemical Biology at Cornell. The fellow will work with me, on computational projects at the intersection between protein bioinformatics, physics and chemistry. This is an NIH-funded position, and is directed toward a fundamental reappraisal of the way bioinformatics is applied to protein studies. In addition to addressing basic problems in protein biophysics, this research has the potential to influence the manner in which research is carried out in many areas of biomedical science.

Applicants with a background in the physical and chemical sciences who are interested in acquiring knowledge in biological areas are welcome to inquire. Applicants with a biological background who are interested in broadening their knowledge of computational biology are also very welcome.

We hope to fill the position quickly, which makes it particularly suitable for candidates who are coming to the end of their current obligations. Please contact me directly.
