Grossmann Lab

is looking for a bioinformatician

Our lab studies the cancer cells that survive chemotherapy and lead to relapse. We focus on high-risk neuroblastoma, a pediatric tumor with 50% mortality rates, and seek novel therapies to prevent relapse.

Job description:

- Scientific (100%):
  - Gene expression analysis from Next Generation Sequencing (NGS)
  - Mutations and copy number analysis from NGS
  - Epigenetic and epitranscriptomic data anaylsis from NGS

Job Requirements:

- Enthusiasm and passion for science

- Experience in
  - Unix/Linux system
  - R and/or Python
  - Analyzing NGS data

- High communication skills
